Scoring Indicators

Code: 5021 (15)

Version: B

Qn. No.	Scoring indicators	Split score	Total Score
Part – A			
I			
1	Load, Mechanism, Material, Manufacturing process, Cost, safety (any4)	2	10
2	Torque $T = (\pi/16) \times d^3 \times \tau$ Where d = Diameter of shaft τ = Permissible shear stress	2	
3	Coefficient of fluctuation of speed is the ratio of max. fluctuation of speed to the mean speed. $K_s = (\omega_1 - \omega_2) / \omega$	2	
4	The relative motion b/w belt and pulley is called slip. Expressed in %.	2	
5	The distance b/w corresponding points of adjacent teeth measured along pitch circle.	2	
Part – B			
(Any Five)			
II			
1	Efficiency of screw jack is the ratio of Ideal torque to the actual torque. $\eta = (W \times r \times \tan \alpha) / W \times r \times \tan (\alpha + \phi)$ $\eta = \tan \alpha / \tan (\alpha + \phi)$ (independent of Load)	3 +3	6
2	 <u>Sunk key</u> Half portion on shaft and half portion on hub. Capable to take high loads..Key way expensive.	Fig 4 +	6
	 <u>Saddle Key</u> Key way is provided only in hub...Suitable for small loads. Keyway cutting is cheap.	2	

Axial movement of hub is permitted...Clutches..change gears

Feather Key

3

Torque $T = 20 \text{ kN-m} = 20 \times 10^6 \text{ N-mm}$.

Permissible shear stress $(\tau) = 70 \text{ N/mm}^2$.

Torque $T = (\pi/16) \times d^3 \times \tau$

$$20 \times 10^6 = (\pi/16) \times d^3 \times 70$$

Diameter of shaft $d = 113.3 \text{ mm}$ (Ans.)

3 + 3

6

4

Torque $T = 1365 \text{ N-m} = 1365 \times 10^3 \text{ N-mm}$.

τ for muff = 15 N/mm^2 .

τ for Shaft = 30 N/mm^2 .

Shaft

Torque $T = (\pi/16) \times d^3 \times \tau = 1365 \times 10^3 = (\pi/16) \times d^3 \times 30$

Diameter of shaft $d = 61.42 \text{ mm} = 62 \text{ mm}$ (Ans.)

Muff

Muff inner Dia = $d = 62 \text{ mm}$.

Muff Outer dia = $2d + 13 \text{ mm} = 137 \text{ mm}$ (Ans.)

Check

$$T = (\pi/16) \times D^3 \times \tau (1 - K^4) = (\pi/16) \times 137^3 \times \tau (1 - (62/137)^4)$$

$$\tau = 2.8 \text{ N/mm}^2 \dots (\text{safe})$$

2

+

2

+

2

6

5

According to load application

1. Radial Bearing (Journal Bearing)

2. Thrust Bearing

Load Perpendicular to axis

Load parallel to axis

(Bushed Bearing, Plummer Block etc) (Ex; Foot step, Collar Bearings)

3. Guide Bearing

Guide the motion of Machine member.

3

+

6

3

According to the type of contact

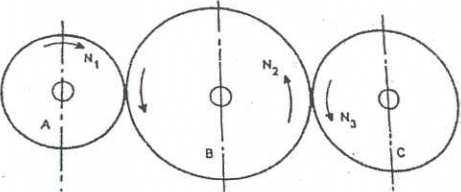

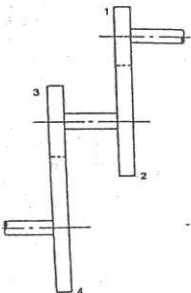

1. Sliding contact Bearing (Ex. Bushed Bearing)

2. Rolling contact Bearing (Ex: Ball Bearing, Roller Bearing)

6

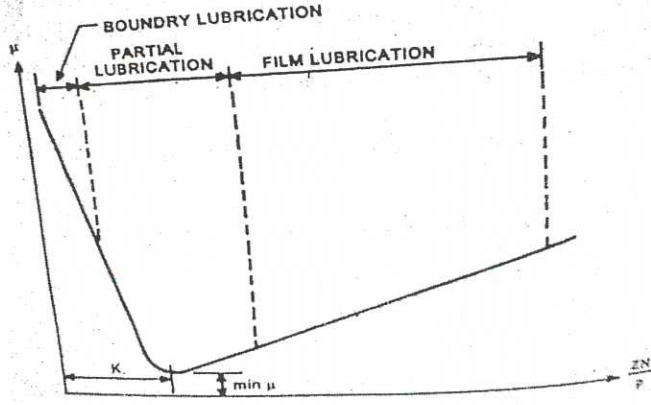

i) Height of governor :- The vertical distance from centre of ball to the point where axis of arms intersects on the spindle axis.

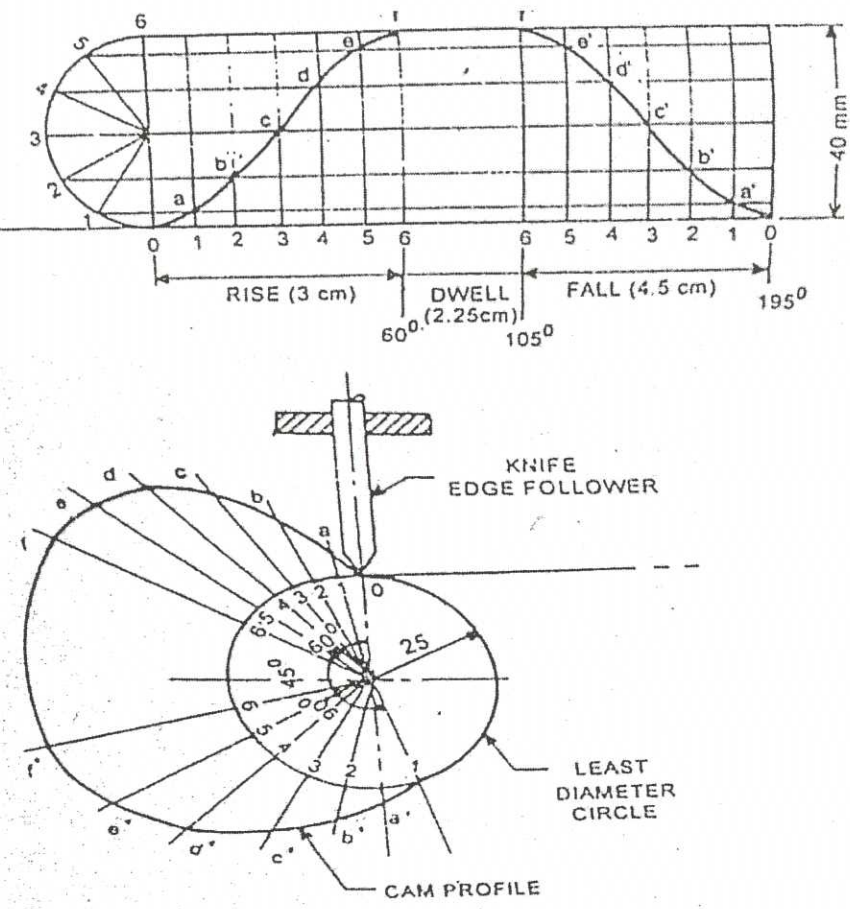

2

	<p>ii) <u>Isochronism of Governor</u> :- The prime mover runs at a particular speed for any position of sleeve.</p> <p>iii) <u>Hunting of Governor</u> :- Speed of prime mover controlled by the governor fluctuates continuously above and below the mean speed .</p>	+ 2 + 2	6
7	 <p>Velocity ratio = $N_3/N_1 = Z_1/Z_3$</p> <p><u>Simple Gear Train</u></p>  <p>V.R. = $N_2/N_1 \times N_4/N_3 = Z_1/Z_2 \times Z_3/Z_4$</p> <p><u>Compound Gear Train</u></p>	3+3	6
